35. (Previously presented) The system of claim 32 wherein billing information is provided to the service by the third enterprise maintaining a billing account specific to the end user.

36. (Previously presented) The system of claim 32 wherein the billing information is provided to the user and the user enters the billing information to the service utilizing the GUI.

37. (Previously presented) A method for enabling syndicated financial transactions at commercial institutions by specific individuals, comprising the steps of:

(a) collecting, by a first enterprise, from one or more information providers, information having to do with financial accounts specific to a user in which a monetary balance is maintained on behalf of the user;

(b) collecting from one or more information providers information having to do with a billing account specific to the user and bills associated with the billing account that are owed by the user;

(c) providing a software graphical user interface (GUI) executable on a user's appliance;

(d) presenting in the GUI an indication for each one of a plurality of the financial accounts associated with the user, and at least one indication of a bill owed by the user; and

(e) generating an instruction to the first enterprise to pay a bill using at least one of the financial accounts by dragging the indication of the financial account to the indication of the bill.

38. (Previously presented) The method of claim 37 wherein the network is the Internet network.

39. (Previously presented) The method of claim 37 wherein the GUI presents two or
